What is Meth?

Meth is short for **Methamphetamine**

Methamphetamines are synthetic mixtures of powerful chemical stimulants which are "cooked" in illegal, easy-to-set up labs.

The Washington State Alcohol/Drug Clearinghouse is a department of the Alcohol/Drug Helpline.

WSADC offers an up-to-date collection of prevention and treatment related educational resources for all audiences. As you learn more about issues relating to alcohol and other drug abuse, keep in mind that

WSADC can help you by offering you access to free prevention materials. The WSADC is a State

Center member of the Regional Alcohol and Drug

Awareness Resource (RADAR) Network and is funded by DSHS-DASA.

Your teeth on Meth

A 23 year old male's teeth and gums after 3+ years of **Meth** use.

facts about your teeth on Meth

Extremely painful teeth & gums

Bad taste from infection and nasty smell

Infected teeth cause an unhealthy body

Lack of sleep due to painful teeth

Feel bad about yourself

Unable to eat or chew many solid foods

Jawbone loss

Gum disease

Costs big bucks to restore or replace teeth

Rapid decay of teeth

Loss of teeth

What's left from a **Meth** user after 3 years of **Meth** use.

Meth eats you

your body from the inside out.

For a meth user, by the time the teeth look like

this.

brain cells have been "eaten" and permanently damaged.

As meth flows through the blood to the heart, muscles, bones and teeth, it eats cells deposits toxins and poisons and destroys healthy tissues.

What happens after they pull the Meth eaten teeth?

So you think dentures are the solution?

When teeth are pulled, the jawbone will start to slowly shrink over the years.

Dentures sit on the bone ridge.

The *disadvantage* of getting a denture at a young age, like 23 years old, is by the time you're 60 your bone ridge will have shrunk beyond the point of wearing a denture functionally, thus leaving you a *denture cripple*.

What do you know about teeth and dentures?

Answer the following questions true or false

Your blood flows through your teeth.

When your blood needs calcium it first will take it from the jawbone.

Natural teeth chew with 150lbs of pressure.

Gum tissue for dentures can only support 5 to 25lbs of pressure.

With dentures you cannot bite or chew with your front teeth.

Dentures need to be replaced every 5 years.

Dentures only function at 10% of the efficiency of your natural teeth.

If you have all your teeth pulled then you may instantly look at least 10 years older.

if you answered true to all the above you are 100% correct.
